DETAILED ACTION

Response to Amendment

Examiner acknowledges receipt of amendment on 8/8/03. The arguments set forth in the response are addressed herein below. Claims 1-3, and 5-7 remain pending. Rejections based upon this prior art are contained herein below. Furthermore, the prior art rejections of record are being maintained for the reasons set forth in the response to argument section herein.

Drawings

New corrected drawings are required in this application because drawings include screen captures that are not considered formal drawings. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-7 rejected under 35 U.S.C. 102(a) as being anticipated by Junkin '862. Junkin teaches a network game system having a plurality of elements that allows play of a real time

Art Unit: 3713

game element trading game (Abstract). The network has communication, interactive terminal, servers, and storage devices (Fig. 1). Junkin describes a computer displays a team roster database that shows possession information (2:41-42), multiple computers communicating over a network that teach discrimination between machines (Fig. 1 and 2:43-45), a menu for selecting and trading team players (8:66-67) that shows transaction information providing, presentation, selection of elements available for trade. Information updating is taught through real time update of team information (6:25-37).

In re claim 2, a selected game element is removed when possession is obtained from another game participant/machine.

In re claim 3, the game is a predetermined competition of baseball or hockey (4:30).

In re claim 4, the menu presented to a user at a terminal device provides selection and decision information (8:54-67).

Response to Arguments

Applicant's arguments filed 8/8/03 have been fully considered but they are not persuasive. Applicant has amended claims to positively recite simultaneous viewing on both display devices, however the instant application is still not in condition for allowance. In Examiner's Office Action of paper no. 7, Examiner explained that Junkin defined real time game updates and that real time update would allow simultaneous display of status for all participants logged on to the system. Thus, the addition of synchronization described by Applicant is still taught by Junkin.
